

Lab1 GIT to work

- Form teams of 4 persons.
- Create a public repository on github.
- Assign team members to the repository and give them write access.
- Create a mini-site with at least 3 web pages (each team member creates at least one HTML page) describing your favourite food recipe. If your team has four team members, we'll need four recipes. I want to know what your favourite dishes are!
- Remember to do your work in a feature branch (not the master branch!). When done, merge with the master branch.
- 1 person writes CSS for this website while the other team members focus on the HTML pages.
- When your website is finished, contribute a link to your github repository on repository: <https://github.com/iamgoodbytes/2imd-webtech2-labs>
- every team member should contribute a link to the repository above **by issuing a pull request** on github.

You have one week to finish this lab. Good luck!
